Though the price per pound of Red Clover is high, the seeding cost per acre still compares favorably with Alfalfa. Your customers with soils adapted to the growing of Red Clover, should consider the advantages often derived from this valuable Legume crop in the form of a CASH seed crop, in addition to its value as a Soiling and Hay crop.

LESPEDeza: Millions of acres hard hit by drought will need Lespedeza. It is recommended for soil types not favorable to other legumes. Snow and rains in the drought-stricken areas where Lespedeza is a popular pasture and hay crop point to a heavy demand this season. Supplies are below normal.

LADINO CLOVER: So little is required per acre that it is one of the cheapest of the legumes to use. With the return of normal moisture conditions, it will be wanted in most pastures as a supplement to the grasses. Only a half pound to pound per acre needed in pasture mixtures. Sown straight, at two to three pounds per acre, it makes excellent hog and poultry pasture.

MERION BLUE GRASS		\$3.90 per lb.

KENTUCKY BLUE GRASS: Cost of using Kentucky Blue Grass in making a lawn is actually less than that of other good turf grasses because of the greater number of seeds per pound. Kentucky Blue Grass, for example, contains three to four times as many seeds per pound as fancy fescues. For most parts of the country, Kentucky Blue Grass is still the most dependable of grasses for a fine, lasting lawn. Shows remarkable endurance under extremes of weather, — high and low temperatures, drought and wet periods. The Midwestern drought in 1954 was severe, yet Kentucky Blue Grass on the average lawn came out of its dormancy to make a good showing this Fall. Sow EARLY (February/March) for best results.
